

3rd Meeting Plan (17/08)

- go through design documents & requirement analysis (sketches)
Does our design fit client's expectation?
Is there any confusion about our design
- check payment system requirements and explain:
do we need to contact banks
do we need authentication and authorization
how to realize it
priority
- feasibility study
visa/mastercard APIs(require registered certification)
web server & database
get the access to the local gallery
choose photos/take photos directly
- check download data from ACNC with client
- check requirements for UI:
color, page style, fonts.
- go through IP contract
- show agenda

3rd Meeting Notes

(Because our client has other things to do, she required to have a shorter meeting.)
Our team show the sketches that we have done for MVP, go through and explain the points.

1. Our client showed a contract document for us, and explain each detail wrote in this document.
2. Check whether we need to get clear information about our clients' company and fill the application form for payment API.
is it possible for client to set up company details
and client told us to send a link to her and she will check and try it

3. Talk about whether a user has to enter password every time for payment
client told us just double click the donate button (when in the quick-donate section) will be fine in the first stage
4. Do we need fingerprint? No
5. Any suggestions for user interface? color, font-size, style of page
the main color is about indigo. The logo of this application is unicorn.
(Our client also showed some spare logo design schemes to our team.)
6. About the rating of charity?

(more details about layout of rating page from our client)

Most rating information can be found from CHANGE PATH, while some big charities without rating information, we can give modification access to staff in CHANGE PATH. (<https://www.change path.com.au>)

Rating schema is that five stars from seven stars rating about transparency, finances and privacy three aspects.
